It currently consists of 9 contigs. The true order of the pieces is not known and their order in tribs requence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                              14020

                                                         NOTE: This is a 'working draft' sequence. It currently consists of 15 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AC067978.2 GI:8901271

It currently
* consists of 3 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* 137286: contig of 137286 bp in length
* 137387 145329: contig of 7943 bp in length
* 145330 145429: gap of unknown length
* 145330 19018: contig of 44589 bp in length.

```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Novel isolated nucleic acid molecule having single nucleotide polymorphism in upstream untranslated region of fibroblast growth factor-3 gene, useful for assessing related susceptibility of mammal to cancer. Claim 1; SEQ ID NO 1; 15pp; English.

```
CC comprising a sequence complementary to ADT97901, a vector comprising the CC ADT97901 operably linked to a reporter gene, a host cell comprising the CC vector, detecting a SNP in the RGF-3 gene in a mammal (involves isolating CC a nucleic acid sample from the mammal, and determining whether a cytosine CC reporter of the mammal, and determining whether a cytosine CC the method (comprising a first oligonucleotide probe which anneals specifically with the target portion of the mammal's genome, where the CC quencher attached to its separate nucleotide residues and the target portion includes the nucleotide residue located at position 69 of ADT97901, and a pair of primers for amplifying a reference portion of the FGF-3 gene, where the reference portion includes the nucleotide residue coligonucleotide probe that can anneal with a target portion of a mammal's genome, where the target portion includes the nucleotide residue coligonucleotide probe that can anneal with a target portion of a mammal's genome, where the target portion includes the nucleotide residue located at position 69 of ADT97901. The method is useful for detecting SNP in FGF 3 gene in a mammal, preferably a human, and is also useful for assessing the relative susceptibility of a mammal to cancer (especially osophageal cancer), which shows an association with the presence of the C-allele. CC ancer is chosen from osophageal cancer is osophageal squamous cell coffice fethylater for the factor (FGFP). The assessing the presence of the C-allele of fethylater for the factor (FGFP) and a marman untranslated region (UTR) of fethylater for the factor (FGFP).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match
